TRANSMITTAL OF SUPPLEMENTAL INFORMATION
DISCLOSURE STATEMENT

Dear Sir:

Transmitted herewith is an Information Disclosure Statement disclosing information which has come to the attention of applicants and/or their attorneys and is being submitted so as to comply with the duty of disclosure set forth in 37 C.F.R. § 1.56. In accordance with 37 C.F.R. § 1.97(b), the enclosed Statement is being filed within three (3) months of the filing date of the above-identified application or before the mailing date of a first Action on the merits.

Neither applicants nor their attorneys make any representation that any information disclosed herein may be "prior art" within the meaning of that term under 35 U.S.C. § 102 or § 103. Moreover, pursuant to 37 C.F.R. § 1.97, the filing of this Information Disclosure Statement

shall not be construed as a representation that a search has been made or as an admission that the information cited herein is, or is considered to be, material to patentability as defined in 37 C.F.R. § 1.56(b).

In accordance with 37 C.F.R. § 1.98, transmitted herewith are:

1. A completed copy of Forms PTO/SB/08a and/or PTO/SB08b "Information Disclosure Statement by Applicant" listing the patents, publications and other information being submitted for consideration; and
2. A legible copy of each patent, publication and other item of information in written form listed on the enclosed Forms PTO/SB/08a and PTO/SB/08b.

NON-ENGLISH INFORMATION

Pursuant to 37 C.F.R. § 1.98, following is a concise explanation of the relevance (as it is presently understood by the individual designated in 37 C.F.R. § 1.56(c) most knowledgeable about the content of the information), of each listed patent, publication or other information that is not in the English language:

1. Japanese Patent Application No. JP 2000 211465 published August 2, 2000 discloses: PROBLEM TO BE SOLVED: To change a pressure characteristic of an inflator, making an air bag analogously expandable, and easily cope with a vehicle of various kinds of interior designs. SOLUTION: At the center of a case 12 opened upward, an inflator 14 is arranged. On the side 30 opposite to an occupant side 32, a folding part 16a on an upper side of an air bag 16 is stored. On the occupant side 32, a folding part 16b on a lower side is stored. A diffuser 20 which is made of a partition wall surrounding the inflator 14 and straightens gas that the inflator 14 emits is provided. The diffuser 20 is formed so that the partition wall may be partially overlapped inside and outside and this overlapped part may be deviated by pressure of inflator gas. In the overlapped part of the partition wall, a supply hole 26 which passes through an inner wall 22 and an outer wall 25 and changes in opening area due to deviation of the overlapped part is formed.
2. German Patent Application No. DE 101 39 768 A1 published February 28, 2002 discloses: The air bag module for a motor vehicle has a housing (14) with a gas generator (14) on its base. The housing has a lid (30) behind which is a folded air bag (16). The gas generator

has a diffuser (22) between it and the air bag. The diffuser has a fixed section (24) and a relatively movable section (26) which closes off openings (28) in the diffuser. The movable section pushes the air bag outwardly when the generator is activated to release the gas outlet openings.

CERTIFICATION UNDER 37 C.F.R. § 1.97(e)

I hereby certify that each item of information listed on the enclosed Information Disclosure Statement was cited in a communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of this Information Disclosure Statement.

Respectfully submitted,

Craig Metcalf
